Assignment 5

Testing

1. Withdraw Money

Test Case 1: Withdraw with sufficient balance

- Input: Account balance = 1000, Withdraw amount = 500
- Expected Result: Withdrawal is successful, new balance = 500
- Test Type: Unit Testing

Test Case 2: Withdraw with insufficient balance

- Input: Account balance = 300, Withdraw amount = 500
- Expected Result: Transaction is rejected, balance remains the same
- Test Type: Unit Testing

Test Case 3: Successful withdrawal through the system

- Action: User logs in and withdraws money
- Expected Result: Amount is deducted and shown in account statement
- Test Type: System Testing

Test Case 4: Withdrawal failure shown to user

- Action: User tries to withdraw more than balance
- Expected Result: Error message is displayed to the user
- Test Type: System Testing

2. Transfer Money

Test Case 5: Transfer to a valid account

- Input: Valid sender account, valid receiver account, sufficient balance
- Expected Result: Money transferred successfully
- Test Type: Unit Testing

Test Case 6: Transfer to an invalid account

- Input: Invalid receiver account number
- Expected Result: Transfer fails with error
- Test Type: Unit Testing

Test Case 7: Successful transfer through the system

- Action: User logs in and transfers money
- Expected Result: Sender balance decreases, receiver balance increases
- Test Type: System Testing

Test Case 8: Error message for invalid account transfer

- Action: User enters wrong receiver account
- Expected Result: System shows error and no money is transferred
- Test Type: System Testing
